

## How To Get

Ask to borrow from a friend that is willing to let it be dropped : Garrett Hannah Caroline Alyssa

Million7m

Buy online from Amazon, eBay, or Temu so that all the options can be covered as most aren't found in stores due to them being made by mainly unknown companies

Million7m

Go to a store like Target, Best Buy, or Walmart to find more common name brands like Apple, Anker, and Ridge. This does make it harder with less choices as not too many known companies make portable chargers

Million7m

Ask companies to sponsor to obtain different charges and ensure their reliability

Million7m

## Desired Factors

The ideal pricepoints for the best portable charger, one star for most expensive and five for least

Million7m

The strength or durability of the portable charger when dropped from about the height that someone's pocket would be at, one star for breaks immediately and five for minimal to no damage done

Million7m

The size of the charger, this is important to ensure the device is efficient, yet still portable, one star for not small enough to carry around and five stars for perfect fit to carry

Million7m

The battery life, this is very essential as it can determine whether or not it is even worth bringing if it can last all day, one star means it dies really quick and five means it lasts for at least 5 full phone charges from 0.

Million7m

Effectiveness on different phones, this is important to cover those who may not have the same phone that is tested, so testing multiple narrows down whoever might be worried about not getting an effective charger.

Million7m

Extra Factors, this includes magsafe for iPhone, multiple ports, stand for phone, and design, these are not necessary, but still matter when determining the best portable charger as it doesn't need to be 5/5 in everything, but if it is close it is important to show to those wanting specific factors. One star for none and five for all of the above.

Million7m

## Websites to Post to

Youtube: Good for digesting the information for most people, but very difficult to show to people without having a following ahead of time

Million7m

Yelp: Good to post full review and can help with other review of similar items to determine any other factors that could matter

Million7m

Facebook: Good for wanting to see the responses to the devices and can maybe allow for more suggestions as well

Million7m

## Control

Same type of phone used before charging to ensure there aren't any different results due to different internal factors

Million7m

Same set charge to ensure no different results and skewing how long the battery life on the portable chargers themselves is.

Million7m

Same height dropped when testing durability, this is important to make sure the damage isn't seemingly less on one more than another

Million7m

New phones, it is important that the phones that are used are new to ensure the battery hasn't degraded over time

Million7m

## Type of Post

Video: this is good for showing the whole process start to finish as well as the tests to ensure to the audience there is no bias

Million7m

Post: Post onto a review or social media website, this is good for engagement and feedback, but also for spreading the information easier and to the most people without having to have a large following.

Million7m

Make Your Own Website: This is good when trying to make something new that is all decided by the tester instead of sticking to a specific format on other websites.
